Is Your Business Ready for Process Mining?

Ask the following questions when considering if process mining is right for your organization:

☐ **Complex & Obscure Processes**
Do you believe your processes to be intricate and interdependent? Do you lack visibility into how these processes really unfold?

☐ **High Variability**
Do you suspect there is significant variation in process execution across customer segments or regions?

☐ **Performance Issues**
Are you experiencing delays, bottlenecks, or unexpected costs?

☐ **Compliance Concerns**
Is regulatory compliance critical and deviations could result in penalties?

☐ **Digital Transformation**
Are you undergoing digital transformation initiatives that struggle to progress at speed?

If process mining is right for you, then check out these questions to determine the right process mining solution for your context:

☐ **Does it work for the business?**
Choose a technology that talks to the business, that is easy to understand and use. You should not depend on IT to run your process mining initiative.

☐ **How can you implement a quick solution?**
Find a solution that you can implement quickly in under 30 days to start seeing results. Leverage these results to build momentum and expand the initiative.

☐ **Is it built with your specific use cases in mind?**
Ensure the solution is designed to address the specific processes and challenges within your organization.

☐ **Do they have a team of process mining experts with a proven track record?**
Work with a well-established company that has demonstrated success in process mining. Learn from the experts to build your internal process mining capability and become independent.

☐ **Does it provide a holistic approach to process management?**
Ensure that the solution supports the full process management journey, beyond process mining. Check out for process design, simulation, optimization and monitoring capabilities

Apromore: Your Process Mining Partner

Why Choose Apromore?

- User-friendly interface, completely no-code, designed for business users.

- Advanced analytics with powerful algorithms, stemming from two decades of research & innovation at the forefront of process mining.

- Seamless integration with existing IT systems.

- Solutions tailored to your organization's needs.

- Expert support from process mining professionals with proven experience in multiple verticals.
